

USE OF K-FLEX PE POLYETHYLENE INSULATION ON STAINLESS STEEL

K-Flex PE polyethylene insulation is free of leachable chloride and halogens. As such, K-Flex PE can be used on stainless steel tubing, piping and equipment. K-Flex PE will not contribute to stress corrosion cracking of stainless steel. K-Flex PE is recommended for these systems subject to suitability for specific applications and / or code compliance.

Note: When using K-Flex PE on Stainless steel systems operating continuously or intermittently at 90°F or higher, K-Flex 720LVOC adhesive must be used.
