

GUIDE TO SHELF LIFE OF K-FLEX PE INSULATION

The recommended shelf life of K-Flex PE insulation products is one year from receipt of goods. However, if stored using good warehouse practices, the shelf life can be extended much longer. Following recommended first-in first-out warehouse procedure, we would expect that most products would be stored one year or less.

The recommended shelf life for insulation products with PSA seam seal closure is one (1) year from date of shipment from the K-Flex USA manufacturing location or a K-Flex USA warehouse location, whichever is later.

In all cases the products should be stored in the original unopened containers, indoors, not exposed to dirt, direct sunlight and other elements, at temperatures ranging from 60° F to 80° F. The material should not be compressed during storage.

Reference K-Flex USA Product Data Sheets for more detailed information about the products listed above.
